

*This policy should be read in conjunction with the Town Council Tree Work Policy.*

Where appropriate, when a tree is removed from NMTC owned or managed land, a minimum of two (2) trees of native species should be planted to replace each one removed, unless the future growth and development of such a replacement cannot be successfully foreseen.

Replacement trees should be of a size and species appropriate to their setting, bearing in mind public access, rooting environment and potential impact on surrounding property and services. Consultation with relevant professionals will take place as and when required.

Subject to funding, each site will be treated on its merits.
