

Zone 4 – Naish Cliff and Barton on Sea

Zone 4 covers the area between Chewton Bunny to the eastern end of the Barton on Sea coastal defences.

The long list of coastal risk management measures for this zone are listed below:

1. Small scale patch repairs
2. Large scale refurbishment of existing defences
3. Beach recycling
4. Beach nourishment
5. Timber groynes
6. Rock groynes
7. Raise crest height of existing defences
8. Vertical seawall
9. Sloping concrete revetment
10. Rock revetment
11. Timber breastwork
12. Gabion baskets filled with rock
13. Steel sheet-piled wall
14. Slope armour and reinforcement
15. Cliff slope stabilisation / drainage
16. Land reclamation
17. Offshore breakwater
18. Offshore reef
19. Improve community resilience.

You can see example pictures of the measures in the [Image Glossary](#).

1.14 Naish Cliff and Barton on Sea (ODU14)

Key facts

- The area covers Naish Cliff and Barton on Sea
- In the west part of the ODU at Naish Cliff, there is a beach in front of the cliff line that is used for recreation and a privately owned caravan park at the top of the cliff. At Barton on Sea, there are properties along the cliff top and beach huts. A cliff path is located landward of the coastal defences. The full length of this area is fronted by a marine Special Protection Area (SPA) designation and the cliffs are designated a Site of Special Scientific Interest (SSSI) due to their geological importance

- The area's cliff is complex. Erosion of the cliff toe is caused by the sea but groundwater also causes cliff instability leading to land sliding. The influence of groundwater instability is linked to levels of rainfall. A combination of cliff toe protection and cliff slope drainage and stability measures are required to manage the rate of cliff top recession. There is a risk of outflanking the defences in Highcliffe (ODU13) to the west if Naish Cliffs continue to erode and the defences in ODU13 remain in place. Therefore, the interaction with Highcliffe (ODU13) is crucial
- The Shoreline Management Plan policy for this area is generally 'managed realignment', but there are three policy units (B2, B3 and B4) and the intent is slightly different for each:
 - In B2 (east), the policy intent is to maintain and improve the drainage system but acknowledge that the cliff top will continue to erode over time
 - In B3 (central), the intent is to initially maintain the areas with defences and drainage, allowing this to adapt to provide a transitional defence to Naish Cliff
 - At B4 (west), a potential way forward is a limited intervention with 'beach nourishment' to allow adaptation of use but this needs further clarification.
- There are a variety of current flood and erosion measures:
 - In the west at Naish Cliffs, the coastline is currently undefended and actively eroding
 - At Barton on Sea in the east, there is a rock revetment (fair/poor condition) at the toe of the cliffs and rock groynes (varied condition).
- In addition, various cliff drainage schemes have been undertaken in the past at Barton on Sea. There is an extensive drainage system (approximately 2km long) consisting of a sheet pile cut off wall and perforated drainage pipes. The system requires regular maintenance and the majority of it is still intact, although failures have occurred at the western end of the system and opposite Marine Drive, west of Barton Court. There is generally a lack of beach material in front of the Barton on Sea defences
- Value of 'do nothing' damages over the next 100 years: £28 million.

The short list of potential coastal risk management measures, most suitable for Naish Cliff and Barton on Sea (ODU14) are:

1. Maintenance – repairs / refurbishments
2. Beach recycling
3. Beach nourishment
4. Rock groynes
5. Rock revetment
6. Cliff slope stabilisation / drainage.

Christchurch Bay and Harbour Flood and Coastal Erosion Risk Management (FCERM) Strategy - Phase 4 Engagement

Zone 4 - Naish Cliff and Barton on Sea Survey

Bournemouth, Christchurch and Poole Council (BCP) and New Forest District Council (NFDC) are working together with the Environment Agency to produce a new Flood and Coastal Erosion Risk Management Strategy (FCERM) for Christchurch Bay and Harbour. It will guide how the frontage from Hengistbury Head to Hurst Spit, encompassing Christchurch Harbour, may be sustainably managed for the next 100 years. You can view more information on the FCERM Strategy project and on previous engagements here: haveyoursay.bcpCouncil.gov.uk/christchurchstrategy.

This fourth engagement phase for the FCERM Strategy is asking for your views on the proposed short list of measures for managing coastal flooding and erosion risk at local level across the Christchurch Bay and Harbour frontage. Once we have your feedback, the final short list of measures will be further appraised to ensure they are technically, economically and environmentally viable. Our phased approach aims to deliver the Strategy setting out the final preferred approach by early 2024.

Please read the information document before answering the questions. If you have any questions or need the survey in a different format, please contact coastal@bcpcouncil.gov.uk. You can also find more information on Phase 4 at: haveyoursay.bcpCouncil.gov.uk/christchurchstrategyphase4.

The engagement will close at midnight on 15 January 2023.

Zone 5 – Taddiford (Barton on Sea to Hordle Cliff)

Zone 5 covers the Taddiford area between Barton on Sea and Hordle Cliff. The west boundary of the ODU is at the eastern end of the Barton on Sea defences and the east boundary is at West Road (western end of the Hordle beach huts).

The long list of coastal risk management measures for this zone are listed below:

1. Small scale patch repairs
2. Large scale refurbishment of existing defences
3. Beach recycling
4. Beach nourishment
5. Timber groynes
6. Rock groynes
7. Raise crest height of existing defences

1.15 Taddiford (ODU15) - Barton on Sea to Hordle Cliff

Key facts

- The area spans over 2.5km along the open coast
- It is used for recreation and amenity purposes. Landward of the cliff line the open space is used for agriculture and a golf course. The full length of this area is fronted by a marine SPA designation and the cliffs are designated a Site of Special Scientific Interest due to their geological importance. Additionally, a permissive path exists along the cliff top (part of 'European long distance path - route E9')
- The Shoreline Management Plan policy for this area is 'no active intervention' to 2105, allowing the cliffs to erode under natural coastal processes
- The beach in front of the cliffs provides the only protection to the cliff toe. There are no linear coastal defences. A single rock structure is located in the west which was constructed to protect a decommissioned storm outfall but which now acts as a terminal groyne. No properties are at risk from erosion in this area until after 2055
- Value of 'do nothing' damages over the next 100 years: £0.4 million.

The short list of potential coastal risk management measures, most suitable for Taddiford (ODU15) - Barton on Sea to Hordle Cliff are:

1. Beach recycling
2. Beach nourishment.
